

We
minimize loss
of revenue
and production
downtime!

Flexible service solutions

Over the last 40 years of servicing more than 55 different offshore wind transmission assets, we have gathered a complete set of skills, experiences, and supply chain, making us a market leader in providing service, corrective maintenance, modifications and offshore installations for the industry.

Service for your wind farm substations

Our multi skilled service team can provide service for the entire system - from the substation to the transition piece. We provide service contracts covering service and maintenance and our large organization of qualified technicians and specialist guarantees quick mobilization anywhere in Europe.

High-definition 3D scanning of your assets

Advanced 3D scanning technology enables us to evaluate the technical conditions of assets and to minimize operational shutdowns and risks. Based on digital assets information site owners can supervise and measure offshore assets which minimizes the number the use of time offshore and eases the planning process.

Certified technicians and maintenance schedules

All our service technicians are qualified to perform offshore as well as adhoc services and corrective maintenance. They have all the necessary work and safety training, courses, and certificates required for offshore work. Assessments are made regularly to evaluate the performance of our service technicians.

We offer planning and management of your maintenance schedule. This schedule is developed in Semco Maritimes management system and uploaded in the computerized maintenance Management System (CMMS) at the control center or in the management system of our client.

Our experience

The service team have wide experience and a strong record from the global offshore sector. In Semco Maritime, safety is part of our DNA and our priority is always to safeguard the people, the environment, and your assets!
